Specification

The disclosure is objected to because of the following informalities: the specification, at page 6, lines 10-11, describes "[t]hermal radiation waves generated by the heat conducting plate 33," which is evidently not an accurate description of the plate function, which is not to generate or radiate waves of thermal radiation, but evidently to conduct thermal energy.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 3 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

At lines 2-3 of the claim, the plate "locate with an interval from a lower portion of the inner pot" is unclear. Is the plate spaced from the inner pot by an interval or gap?

Claim Rejections - 35 USC § 103

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's acknowledged prior art in view of U.S. Pat. 3885129 (US'129) and either of U.S. Pats. 6114667 (US'667) or 5263115 (US'115)

The acknowledged prior art, at pages 1-4 of the instant specification, discloses that a sealed cooker with inner and outer pots and electric heating means within the base of the latter were well known at the time of the invention. The acknowledged prior art does not explicitly disclose a PTC heating element with a heat conducting plate. However, US'129 discloses a PTC heating element 30 with an electrically insulating layer 39, and either of US'667 (Fig. 12, col. 6, line 66, to col. 7, line 5) or US'115 (Figs. 1-4, col. 3, lines 7-22) discloses a heat conducting plate transmitting thermal energy from a heater to a cooking vessel. It would have been obvious to adapt the PTC heater of US'129 to the prior art sealed cooker to provide self-limiting heater control, and to utilize a heat conducting plate to enhance heating uniformity.
